Github	**https://github.com/arjun2010-ece**

EDUCATION and CERTIFICATIONS

- Masters in Software Engineering from **Faculty of Engineering of University of Porto**, Portugal(2018-2020).
- B.Tech (Electronics and Communication) degree from **NIT Arunachal Pradesh**, Yupia, India, in **2014** with a CGPA 7.89 (73.9%).

WORK EXPERIENCE

Organization	Location	From	To	Designation (Role)
Applied Blockchain	Porto, Portugal	February 2022	till now	Software developer
Aubay	Porto, Portugal	November 2020	January 2022	Software developer
Jumpseller	Porto, Portugal	February 2020	August 8, 2020	Software developer
Cognizant Technology Solutions	Chennai, India	July 2015	Dec 2017	Software developer

PROJECTS

1. Aubay :

Customer	Bolttech
Duration	November 2020 – January 2022
Role	Developer

Project description:

I was responsible for creating and managing corporate sites for bolttech for different markets like
Hongkong, Thailand, Korea, Vietnam, Europe, Global site and US markets.

Roles and Responsibility
- Developed 3 websites for different markets from scratch like US, Europe and Global sites with GatsbyJs / ReactJs, Tailwind CSS and DatoCMS.
- Made enhancements on the existing sites such as Hongkong, Thailand, Korea, Vietnam.
- Fixed the UI bugs on existing sites.
- Created the sitemap for all the sites for better SEO purposes also.
- Deployed the sites such as US, Europe and Global markets on Netlify.
- Implemented the redirect of one website domain and all its associated links to another through Netlify.
- Consolidate duplicate URLs with canonical URLs.
- Created the architecture on CMS such as DatoCMS.
- Implemented the fluid typography in the project.
- Performed successfully daily activities remotely, by aligning and establishing a meaningful and clear communication channel with Thailand , Hongkong, Singapore and US team.
- Trained and supported one junior developer also in the project.

2. Jumpseller ecommerce platform:

Customer	Ecommerce platform
Duration	february 2020 – August 2020
Role	Developer

Project description:

Since jumpseller is a product based company and have their own ecommerce solutions and work
for their own product so all the frontend and backend developments for enhancing the products
was part of the responsibility.

Roles and Responsibility
- Developed a complete new dashboard using chart libraries, reactjs, redux, bootstrap, HTML5, CSS3.
- Developed the backend of the new dashboard for CRUD and search functionality.
- Changes the old react class based component to the latest hooks component in reactjs.
- Implemented the infinite loading functionality for a lot of data coming from the backend.

- Modified the checkout functionality of the product page using pure javascript and jquery.
- Implemented the Google places API on checkout for auto filling of addresses like zipcode, communa, country etc.
- Created a multi level (3-level) custom modal for uploading subscription payment receipts in reactjs.
- Fixed the UI bugs on clients' stores as well as the main repository.
- Worked on enhancing the jumpseller javascript libraries defined inside the codebase and created some new ones also.
- Worked on webpack configuration to fix their css autoloading issues and creating css/scss files inside projects in any locations.
- Setup Eslint, StyleLint and prettier with husky to standardize their codebase.
- Setup CI/CD pipeline in CircleCI for frontend deployment to AWS.
- Worked on NextJS to create a server side application.
- Created APIs in Node ExpressJS framework for creating CRUD applications.

3. FT-IDE:

Customer	MARKETING WEB PORTAL
Duration	May 2016 – Dec 2018
Role	Developer

Project description:
Developed a public web portal for a client.

Roles and Responsibility
- Developed Web applications using technologies (HTML5, CSS3, JQuery and Bootstrap and ReactJs and Redux).
- Designing responsive web pages as per the design mentioned in Figma design.
- Involved in developing, debugging and testing the application in all the devices and developed pages using Bootstrap.
- Worked on Version Control using GIT and Bit-Bucket.
- Resolving defects in marketing web portal
- Setup CI/CD pipeline in Gitlab for frontend and backend and deployment to Heroku.
- Developed APIs in Node ExpressJS framework for CRUD applications using MongoDB/MySql database.
- Made use of AWS S3 and AWS SES for sending emails.
- Organize reusable components within the system.
- Refactor the code using the best practices.
- Unit testing in ExpressJS backend code

4. Customer Management:

Customer	User Profile Module
Duration	Oct 2015 – May 2016(8 Month)
Role	Developer

Project description:
Revamped and rewritten the clients legacy code in dotnet to ReactJS.

Roles and Responsibility
- Designed client side reusable UI and many responsive pages.
- Performed CRUD operation by integrating with the REST API.
- Involved in debugging and maintaining the React code.
- Involved in making the images optimized by converting it to base64 format.
- Created the pagination in react to handle infinite data in the frontend.

5. Campus Associate Training Portal

Customer	Cognizant
Duration	July 2015 – Oct 2015(4 Month)
Role	Developer

Project description:
Development of an application for the newly joined trainees in the company and tracking their training online.

Role & Responsibilities:

- Designed client side UI and many pages with responsiveness.
- Performed CRUD operation by integrating with the REST API.
- Involved in debugging and maintaining the React code.
